Software Development Guidelines

1. Version Control

All source code must be maintained in the company's approved Git repository.

Developers should create a separate branch for each feature or bug fix.

2. Code Review

All changes must be reviewed by at least one other developer before being merged into the main branch.

3. Coding Standards

Developers should follow the project's established naming conventions, formatting rules, and documentation standards.

4. Testing

New features should include appropriate unit tests.

Developers should verify that existing functionality continues to work after making changes.

5. Commit Messages

Commit messages should clearly describe the change being made.

6. Documentation

Important features, APIs, configuration changes, and deployment requirements should be documented.

7. Security

Developers must not commit passwords, API keys, database credentials, or other sensitive information to the source code repository.
